Kinan Al Hariri

Computer Science Student

Toronto, ON | kinanalhariri88@gmail.com | GitHub | LinkedIn

Education

B.A.Sc. Computer Science Expected Apr. 2031
McMaster University *Hamilton, ON*

- Relevant Coursework: Functional Programming (Haskell), Software Development Tools (Git, Linux, C), Discrete Mathematics, Calculus, Linear Algebra, Introduction to Programming (Python)

Experience

Door-to-Door Sales Representative May 2024 – Aug. 2024
GoSales – Mississauga, ON

- Sold **Telus home services** (Internet, mobility, security) through door-to-door outreach.
- Researched neighbourhoods beforehand, finding **new homes 40% more likely** to purchase security and phone plans.
- Adapted sales approach using homeowner demographics and property data to improve engagement.

President of Digital Creation Sept. 2026 – Present
McMaster Middle Eastern Student Association (MESA) — Hamilton, ON

- Designed and launched MESA's club website using **React** and **Firebase**, centralizing event listings and sign-ups for 200+ members
- Built an automated event RSVP and check-in system (based on QR codes), reducing manual sign-in time by **70 percent** across **8** events
- Produced **40+ graphics and short-form videos** for Instagram and TikTok, growing followers by 35 percent (1,200 → 1,620) since Sept. 2026
- Used Instagram Insights to track engagement and A/B test post timing, which raised average post reach by 25 percent

App Developer Feb. 2025 – June 2025
Career Education Council- Apple Develop The Future

- Designed and developed an **iOS app** prototype using **Swift and SwiftUI**, turning an initial concept into a functional user interface.
- Iterated on features through user testing and feedback, and presented the app's design decisions and development process.

Projects

Motivez – Social Discovery Startup *React Native, Expo Go, PostgreSQL, Python, JS, Google Maps API, Node.js, Redis*

- Founded and led a cross-functional team to develop **Motivez**, a full-stack mobile app that enables users to discover and share activities with friends based on **location, preferences**, and **real-time data**.
- Engineered a scalable backend using **Python + Node.js** with **Supabase (PostgreSQL)**, designed to support global data persistence while initially focusing on the **GTA** region for launch.
- Implemented advanced **recommendation algorithms**, real-time chat, and event pipelines; rapidly onboarded **50+ beta users** and successfully deployed on **iOS and Android**.
- Addressed API overuse by integrating **Redis caching** for the deck swiper, reducing API calls and enhancing user experience by storing location-specific data for efficient content delivery.

Quantic Learning – STEM Learning App *React Native, Expo, TypeScript, Python, FastAPI, SQLAlchemy, SymPy*

- **Paid contract** to build a gamified learning app for Ontario high school and first-year university **STEM** courses, shipping to **iOS, Android, and web** from a single **React Native + Expo** codebase.
- Engineered a custom **math-answer grader**: a recursive-descent parser builds **SymPy** expressions without `eval`, and numeric sampling accepts any equivalent form (e.g. $2(x+1) = 2x+2$).
- Designed a **FastAPI** backend with **server-side grading**, XP, and streaks so scores can't be faked; secured accounts with **Argon2id**, **JWT** access tokens, and rotating refresh tokens with reuse detection.
- Built a **GitHub Actions CI** pipeline running pytest, Ruff, TypeScript checks, and a production web build on every push, with all course content validated at startup.

Oracle-Based Data Center Management System *Oracle, SQL, PL/SQL, Netlify, React, Web Dashboard*

- Built a simulated data center management platform enabling real-time status updates, resource removal, and management for servers, CPUs, GPUs, and sensors via **Oracle** and **SQL**.
- Built a **React** dashboard on **Netlify** with predictive queries to track utilization and forecast hardware issues.

Technical Skills

- Frameworks/Libraries/Tools: VHDL, React Native, React, Node.js, Supabase, PostgreSQL, Oracle, SQL, PL/SQL, FastAPI, Chart.js, Expo Go, Python, JavaScript/TypeScript
- Certificates: AWS Certified Cloud Practitioner (In Progress)
